NuQuip® Model DV Series Dump Valves
Pressures Up to 10,000 psi (689 bar)

The NuQuip® Model DV Series Dump Valve is a pneumatically-operated control valve for managing the flow of liquids in a hydrostatic pressure system. Designed for operator safety and to reduce damage to equipment, these valves are used in applications with working pressures up to 10,000 psi (689 bar).

Contact [Airmo](#) for information on custom design dump valve options.

Product Features

	Specifications	Description
	Maximum Pressure:	10,000 psi (689 bar)
	Temperature:	32° F to 120° F (0° C to 49° C)
	Services:	Water and other liquids
	Operation:	Two-stage, air-actuated
	Port Style:	NPT (contact Airmo)
	Seal Materials:	Compatible with most liquids
	Construction:	Precision-machined, heat-treated stainless steel
	Custom Options:	Custom designs considered
